## Understanding your iPad

### How to Transfer music to your iPad

- 1  
Transfer music to your iPad from a computer using Apple's free iTunes software. If you do not already have iTunes, go to the iTunes website to download and install it before continuing.
- 2  
Turn on the iPad and the computer.
- 3  
Connect the USB cord to both the iPad and the computer. When you do this, iTunes should recognize the iPad and automatically open. If it does not open, launch iTunes. If this is the first time you've connected the iPad to iTunes on this computer, you will have to go through some setup steps.
- 4  
Once connected, the iPad appears under the "Devices" list in the left-hand column of iTunes. Click on the iPad icon in this column.
- 5  
In the main window of iTunes, select the "Music" tab from the top of the screen (1). Check the "Sync Music" box (2) and select the music you wish to transfer to the iPad. You can choose from your entire song library or individual playlists (3). Tick the Albums or Playlists you want to transfer (4)

- 6  
Click "Apply" in the bottom-right corner of the main iTunes screen, followed by "Sync" in the same area to transfer the music to your iPad.
